

## PRESS RELEASE

### **systemsync solutions ltd announces first payroll customers: Bond Payrite, Xero, Qtac, Brightpay, Benchmark**

**London, UK, 3<sup>rd</sup> September 2015** systemsync solutions ltd is pleased to announce the first payroll partners who are committed to using its product - pensionsync - to transfer AE data to pension providers at a click of a button.

While everyone has focussed on the effort required by employers around their Staging Date, it has been too easily overlooked that simply transferring AE data from payroll to pension providers currently takes between 30 minutes and 4 hours every single payroll cycle. For users of Bond Payrite, QTAC, Xero, BrightPay and Benchmark, CSV uploads will become a thing of the past, as they will be able to use pensionsync within their software to enable the safe and reliable transfer of AE data at a click of the button.

Will Lovegrove, CEO of systemsync solutions ltd stated, *"This is a step change in the handling of Automatic Enrolment data. That our payroll partners have embraced this technology at an early stage to integrate with us is not only a huge endorsement of the pensionsync proposition but also a statement that API data transfer is here to stay. These companies truly are partners, they have been crucial in shaping our proposition to meet their needs and those of the wider payroll industry."*

Ed Patchett, Head of Operations at Bond International Software stated, *"For our bureau clients processing multiple payrolls, we have seen one of greatest areas of pain is the process outside the system of manually uploading data to the various pension companies. Simply put pensionsync solves this, and we are very pleased to be partnering with them to offer a secure and robust end to end solution to our client base."*

Alex Rowson, Technical Director at QTAC Solutions Ltd said, *"The opportunity provided by pensionsync to allow our customers a single 'straight through' interface to handle the week by week data transfer will hugely reduce the additional time currently taken to supply member and contribution details to Pension providers. This will allow our customers to provide an Auto Enrolment service to their existing clients without the need for additional operational resources."*

Oliver Furniss, General Manager of Product at Xero said, *"Our customers and partners tell us that workplace pension changes, and specifically automatic enrolment, is the biggest change to impact them since the introduction of RTI. We want to make the information transfer from payroll to pension fund as seamless as possible. That's why we're going to partner with systemsync and their pensionsync platform."*

Karen Thomson, Director - Group Payroll Services at Armstrong Watson said *"Automatic Enrolment using CSV file uploads is labour intensive and puts considerable strain on our resources. The scheme set up and automated data transfer provided by Bond and pensionsync means that Armstrong Watson can focus our resources on core payroll activities rather uploading files and managing errors. But most importantly, working with pensionsync means that Armstrong Watson can partner with trusted pension providers to offer a range of quality pension outcomes to our bureau clients."*

Paul Byrne, Director at BrightPay, *"Brightpay is committed to providing intuitive market-leading payroll software. Automated AE data transfer is a far superior process to manipulating CSV files and working with pensionsync we aim to deliver automated secure data transfer and time savings to our clients."*

Simon Harvey, MD at Benchmark Software, commented *"Benchmark Software provides a highly configurable payroll software. Customer experience is the most important thing for us and working with pensionsync means that we can continue to enhance that experience through offering automated data transfer in the future."*

**About systemsync solutions ltd** | <http://www.systemsyncsolutions.com> | <https://www.pensionsync.com>

systemsync solutions ltd was formed in 2015 by the founders of a software development consultancy based in Parsons Green, London. systemsync solutions ltd has worked alongside The Pensions Regulator, The Chartered Institute of Payroll Professionals, Pensions BIB and major players in the market to help define the PAPDIS data standard.
