

pensionsync

Lee Williams
IT Director

“Were pensionsync not around we could end up spending over 12 months writing interfaces to different pension providers”

QTAC Payroll help thousands of employers and bureaux complete their payroll each month.

QTAC’s IT Director, Lee Williams, had overall responsibility for integrating QTAC’s payroll software into the pensionsync platform. So, why is pension data automation important?

“Manual data uploads to pension providers is a very time-consuming task. Automation of that task by web APIs has the potential to save our customers a lot of time and money”

But the problem facing all payroll software companies is that every pension provider has different protocols and treats data differently. For QTAC it was not cost effective to integrate separately with each different pension provider.

That’s where pensionsync comes in. We build data interfaces to the major pension providers so that your payroll software does not have to.

“Working with pensionsync helps QTAC minimise software development costs because its pensionsync that works directly with the pension providers”

QTAC is rolling out the pensionsync Direct Plan.

“pensionsync’s Direct business model was the best fit for QTAC. Our customers get all of the benefits of pension data automation but pensionsync support and bill our customers directly. We’re sharing the responsibility of rolling out pension data automation with pensionsync.”

pensionsync is designed to be easy to work with at every stage. Our online knowledge base & free Software Development Kit significantly reduces integration timescales. But the real time & cost saving is that 1 integration with pensionsync gives access to 5 major pension providers.

“Working with the pensionsync team was a positive experience. Their documentation is really good and the support we’ve received from all their team has been superb.”
